Definitions of Audit Opinions

Controls Assurance Level	Detailed Definition
Minimal	Systems audit
	The authority and/or service is exposed to a significant risk that could lead to failure to achieve key authority/service objectives, major loss/error, fraud/impropriety or damage to reputation. This is because key controls do not exist with the absence of at least one critical control or there is evidence that there is significant non-compliance with key controls.
	VFM audit
	Objectives are not being achieved economically, effectively and efficiently.
Limited	Systems audit
	The area/system is exposed to risks that could lead to failure to achieve the objectives of the area/system under review e.g. error, loss, fraud/impropriety or damage to reputation. This is because, key controls exist but they are not applied, or there is significant evidence that they are not applied consistently and effectively.
	VFM audit
	Objectives are not being achieved through an appropriate balance of economy, efficiency and effectiveness. Improvements could be made in more than one of the three E's.
Substantial	Systems audit
	There is some limited exposure to risk of error, loss, fraud, impropriety or damage to reputation, which can be mitigated by achievable measures. Key or compensating controls exist but there may be some inconsistency in application.
	VFM audit
	Objectives are largely being achieved efficiently, effectively and economically, but areas for further improvement exist.
High	Systems audit
	The system/area under review is not exposed to foreseeable risk, as key controls exist and are applied consistently and effectively.
	VFM audit
	Objectives being achieved efficiently, effectively and economically.
