Document Type	Technical Note Rev A
Site Location	Tonbridge Retail Park
Proposed Development	Floorspace reduction and introduction of food retail
Client	London Metric
Drawing Reference	N/A
Status	Post -Submission
Date	6/12/21
Written By	CS
Checked By	JA

Preamble

This Technical Note (TN) has been produced to assess existing traffic movements related to Tonbridge Retail Park over a longer period.

Background

The retail park has been subject to several alterations, the latest proposal is to reduce the floorspace and remove the restriction on part of the remaining floorspace to allow food retail. Additional food retail space increases the propensity for linked trips between units, due to the similarity of trip purpose (food retail trip). Linked trips typically occur at a lower rate with a specialist non-food retailer such as Go Outdoors.

A planning application was submitted in July 2021, using data collected on Friday 11th and Saturday 12th June 2021.

Planning Committee discussed the application formally on the 25th November 2021. One Councillor stated that the country still had lockdown measures in place during the survey period. For clarity the only lockdown measure in place was on nightclubs, which would have no effect on this retail park.

A variety of other figures were quoted from other surveys and counts carried out by a councillor; it was agreed that further data was required in relation to existing trips recorded at the retail park prior to councillors being able to determine this application.

Traffic Data

Traffic surveys were carried out on the 11th June 2021 between 15:00-19:00 and 12th June 2021 between 11:00 and 14:00 to determine the peak hour. The peak hour is where the background traffic combined with the retail park traffic is highest. On the Friday the peak hour was recorded as occurring between 17:00 and 18:00 and on the Saturday between 11:00 and 12:00.

The car park is monitored using automatic number plate recognition to monitor duration of stay, and it is possible to extract arrival numbers from the system in place, this has been carried out for the whole of November to give a longer term view, which is more statistically reliable. There were no lockdown measures in place that would affect retail trips in Tonbridge at any point during these surveys and as they are an average of every Friday and Saturday respectively, they would address minor disruptions.

The traffic data is summarised in the tables below;

Study Period/Day	Friday	Saturday
June Survey	189	338
Average for November	143	226
Difference	-46	-112

Table 1 – Comparison between peak hour arrivals in June 2021 and the average arrivals in the same hour on the same day of the week in November 2021

Study Period/Day	Friday	Saturday
June Survey	189	338
Highest Recorded November	157 (26/11/21)	254 (13/11/21)
Difference	-32	-84

Table 2 – Comparison between the peak hour arrivals in June 2021 and the highest recorded number of arrivals in the same hour on the same day of the week in November 2021

Furthermore, it is possible to look at the entire survey period to show a longer-term view of the results (1500 – 1900 Weekday; 1100 – 1400 Saturday).

Study Period/Day	Friday	Saturday
June Survey	838	933
Average for November	582	683
Difference	-256	-250

Table 3 – Comparison between arrivals in June 2021 during the entire study period and the average arrivals during the same time period on the same day of the week in November 2021

Study Period/Day	Friday	Saturday
June Survey	838	933
Highest Recorded November	617(05/11/21)	779(06/11/21)
Difference	-221	-154

Table 4 – Comparison between arrivals in June 2021 during the entire study period and the highest recorded arrivals during the same time period of the same day in November 2021.

Summary and Conclusion

The arrivals recorded at Tonbridge Retail park in June 2021 were greater in every instance than those record in November 2021. The data collected in June 2021 was either more robust, or indeed higher than normal. This could be due to the recent relaxation in retail restrictions and demand was greater due to that.

On the basis of the above it is considered that the June traffic counts were robust. The conclusion in respect of planning policy (NPPF) would remain the same, there would not be a severe residual effect as a result of granting consent, as such there are no sound grounds for an objection on highway safety or capacity grounds.
